FERTILIZERS

TRADE VALUES OF FERTILIZING INGREDIENTS IN RAW MATERIALS AND CHEMICALS, 1899.

	Cents per lb.
Nitrogen in ammonia salts	15.0
“ nitrates	12.5
“ dry and fine ground fish, meat, and blood, and in high grade mixed fertilizers	14.0
“ in cotton-seed meal, linseed meal, and castor-pomace	12.0
“ fine ground bone and tankage	14.0
“ medium ground bone and tankage	10.0
Phosphoric acid soluble in water	4.5
“ “ soluble in ammonium citrate (reverted)	4.0
“ “ in fine ground bone and tankage	4.0
“ “ in medium ground bone and tankage	4.0
“ “ in fine ground fish, cotton-seed meal, linseed meal, castor- pomace, and wood ashes	4.0
“ “ insoluble in mixed fertilizers	2.0
Potash as sulphate free from chlorides and in wood ashes	5.0
“ “ muriate	4.25

The above values are based on the wholesale market price for the materials, when sold in large lots at the principal trade centers in New England. The valuation of a ton of any mixed fertilizer based on the above figures will usually fall ten dollars below the retail price at the local agency. This varia-

tion includes such fixed charges as cost of mixing, bags, cartage and freight, salaries and commissions of agents, and interest.

THE FERTILIZER INSPECTION IN 1899.

This year, as in the past, the New Hampshire College Agricultural Experiment Station has co-operated with the state board of agriculture in an inspection of the commercial fertilizers sold in the state.

In accordance with the public statutes, the collection of samples of the different fertilizers has been in charge of the secretary of the board of agriculture, Hon. N. J. Bachelder, who has been assisted by Mr. H. E. Barnard; while the chemical analyses have been performed under the direction of the chemist of the experiment station, Prof. Fred W. Morse, who has had for assistants, Dr. E. W. Lazell, and Messrs. Arthur Given and Harry E. Barnard.

The work of the inspectors in this state cannot be finished before the farmers buy their season's stock of fertilizers, because the manufacturers do not, in many cases, place their goods in the hands of the local agents until April 1, or later. Consequently the analyses of the past year must serve as a guide to the composition of the fertilizers on the market for the coming year. The publication of this bulletin has therefore been delayed, with the idea that it will receive more attention now than if issued last fall, and thus be more effective in decreasing the use of inferior brands.

Under the present fertilizer law a manufacturer pays a license fee, which permits the sale of as many different brands of fertilizers as he may choose to place on the market. The multiplication of brands by the different makers has required more analyses than could be paid for out of the license fees, therefore several of the samples collected were not analyzed.

The list of brands not analyzed is published in order that all brands found by the agent of the board of agriculture may be included in this report, and that their guarantees may be compared by those farmers who may wish to select a fertilizer on the basis of its percentage composition.

The agent of the board of agriculture visited twenty-eight different towns representing all sections of the state. He collected, from eighty-seven agencies, two hundred and thirty-three samples of fertilizers, representing one hundred and twenty-eight different brands of goods and twenty-six manufacturers. The towns visited were as follows:

Portsmouth, Epping, Newton, Hollis, Nashua, Merrimack, Wilton, Hancock, Hillsborough Bridge, Hillsborough Upper Village, Keene, Walpole, Claremont, Goshen, Unity, Newport, Manchester, Derry, Laconia, Tilton, Franklin Falls, Lebanon, Woodsville, Lancaster, Colebrook, Conway, Wolfeborough, and Rochester.

The manufacturers, brands, and analytical results are given in the following tables:

COMPOSITION OF MINED FERTILIZERS COLLECTED BY THE STATE BOARD OF AGRICULTURE, 1899.

Number.	MANUFACTURER AND BRAND.	Nitrogen in 100 lbs.		Phosphoric Acid in 100 lbs.					Potash in 100 lbs.
